Timeline

OVERVIEW

×   The overview of this project is to create an engaging and interactive application that allows users to explore job opportunities in a more interactive and user friendly way in the real world.

×   This platform will provide a welcoming and interactive experience for the job seekers with it's UI which is similar to a dating site.

×   The users will be able to swipe through the job postings to apply.

×   They will be able to generate custom resumes for each jobs.

TECHNOLOGIES

React

React along with JavaScript and some NPM package for swipe

R

N

Nodejs

Nodejs with Express.js on top of it for better backend performance

A non–relational Nosql database for storing user data

MongoDB

M

G
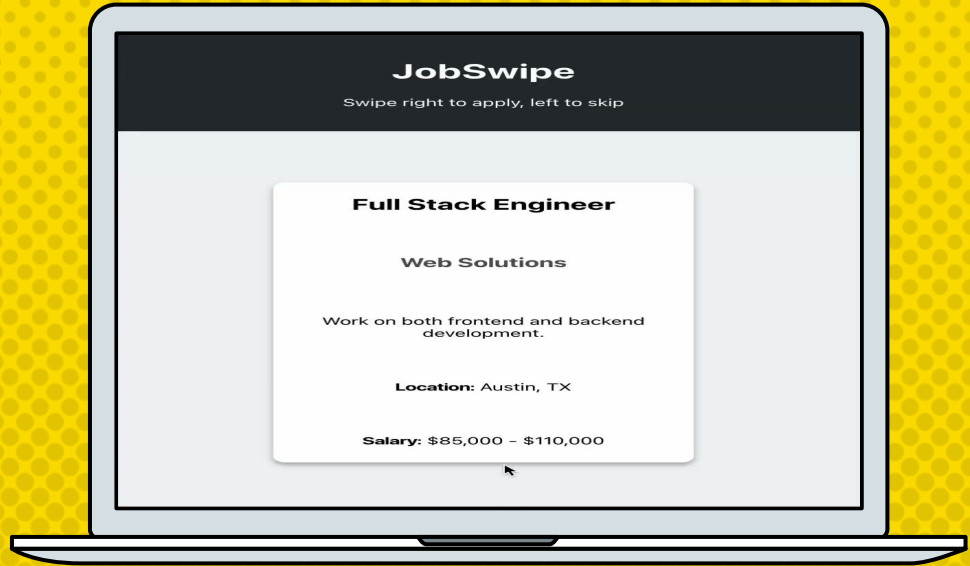

Open–AI model for generating custom resume

GPT
